Bilateral Meetings

- Tuesday 12:30-16:00

Description

Trentino Sviluppo is a one-stop-shop in Trentino (Northern Italy) for locating business, attracting investments, developing strategic clusters, innovating business, and supporting internationalization, real estate and financial system interventions. At Trentino Sviluppo, we support companies wishing to invest and set up business in Trentino, helping them expand their operations by providing assistance throughout the process, from HR recruiting to relations with research facilities, locating the best industrial sites, accessing credit and facilitations, support in developing R&D projects. In the delicate phase of starting up a business, we offer space and support at the Business Innovation Centres, which contain research units, accelerators in the mechatronics and green sectors. Our aim is to foster the sustainable growth of the "Trentino system" by developing actions and services for the creation of new entrepreneurial and innovation projects, in connections with the research centers of the territory, which operates in the key sectors of agriculture, environment and food. The Agrifood sector is crucial for Trentino, which is a territory particularly sensitive towards high quality products, as testified by the high number of protected designations of origin (apples, grapes, and small fruits), in line with its environmental policies on sustainable production processes and the growing attention towards the well-being of citizens.
